

## **EXPLORATION THROUGH RESEARCH**

- Since the last time you wrote about your research, what did you find out? Did your driving question or topic change? Why or why not?
- Now that you are in the "student-led research" part of the process, which student-led research option are you doing? (Survey, interview of an expert, observation, or experiment) Why?
- What has been easy and what has been difficult about this process?
- In your next steps, what do you need to do to make sure you successfully complete this component of the project? What are some things you need to do?
- How is your collaboration going so far? What is working well and not working well?

The driving topic never changed but the question changed a little. The question changed a little because it needed to be better. We are doing a survey because it will be an easier way to get the information we need. It was easy to make the questions for the survey but it was difficult to pick a picture for some of the questions. We need to keep working hard on it to make sure we successfully complete this component of the project. The collaboration is going ok. Talking to my group members about everything involving the project is working very well.
